FAA AC 43.13 Updated

Aircraft Inspection, Repair and Alterations

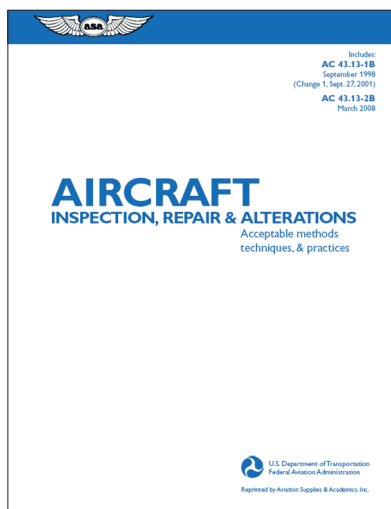

Advisory Circular 43.13 is the definitive and official reference on the inspection, repair and alteration of non-pressurized areas of civil aircraft with a gross weight of 12,500 lbs or less. Used mainly by AMTs, it is an essential resource for aircraft owners as well.

ASA's new *Aircraft Inspection, Repair & Alterations: Acceptable methods, techniques, & Practices* (#ASA-AC43.13-1B2B) contains both AC 43.13-1B (effective September 2001) and AC 43.13-2B (effective March 2008). And unlike its predecessor, AC 43.13-2B can now be used as approved data. This new edition supersedes ASA-AC43.13B. Softcover, illustrated, 8-1/4" x 10-3/4", 834 pages.

Cover returns of ASA-AC43.13B will be accepted from **Distributors only** through May 31, 2008.
