

Engine Restarts in On Top 9.5

There is a programming bug in this version of On Top that affects those aircraft with only a single engine and the left engine in the Baron. If your flight controls include a mixture lever, cutting the fuel flow by pulling back on that lever will trigger the problem. The normal start up procedure will fail after that.

Here is a workaround if you find yourself in this situation.

In the top navigation toolbar select Tools, then click on Setup. In the Setup select the Cockpit button. In the Engine column raise the RPMs to higher than a thousand (1000) RPMs. Verify that your mixture lever on your yoke or throttle quadrant is set to Full, then click the Set button on the bottom right of the Setup window to return to the cockpit.
