Prepware 10— Updated for 2008

Newcastle, WA— Announcing Prepware 2008, our FAA Knowledge Exam prep software. As with all previous versions, users can take true-to-form practice exams and get immediate feedback on whatever test areas need more work. Each Prepware title includes all aircraft categories—users tell the software which test they’re preparing for, and the study sessions and practice tests are generated accordingly. Version 10 includes the new FAA Knowledge Exams released June 25, 2007 although the automatic update feature will keep customers current as new tests are released.

The Prepware 2008 user interface features a performance graph depicting total score and a score for each subject, as well as the test itself (shows the selected answer, the correct answer and explanation). Users can build a custom-made follow-up quiz from their airman test report by plugging the subject matter knowledge codes into the program. Features for Version 10 include:

- Compatible with both PC and Macintosh systems.
- CX-2 electronic flight computer built into the program, accessed by a click of a button during study sessions or simulated tests.
- Make and save user notes while studying, in a notes field.
- “Google”-like search capabilities...search for a word or phrase in the entire database of questions, answers, and explanations.
- Shuffle the answer stems for a true test of knowledge.
- Includes a comprehensive and searchable glossary.
- Simulates the CATS testing center in screen layout, buttons, program navigation.
- You can choose to print results, or email them to instructors to obtain an endorsement to take the FAA test.
- Built-in study guides are there at a click of a button for study sessions, with the same comprehensive text and figures from ASA’s Test Preps and Fast-Track Test Guides.

- All figures are available onscreen.
- Download and automatically update the database the software uses each time the FAA releases new or changed questions; also, the free email subscription service keeps you informed anytime the FAA releases new tests.
- *Prepware School* lets instructors build custom quizzes and full length tests; students can access these tests anywhere they have an internet connection.
