## **New Powered Parachute FAA Handbook Available From ASA**

*Newcastle, WA*—ASA expands its library of FAA titles with the new *Powered Parachute Flying Handbook*.

A powered parachute (PPC) is a category of aircraft that requires the pilot to inflate the wing (parachute) and then control the aircraft with a “pendulum configuration” of the cart hanging below it. This unique and fun aircraft is an evolution of a number of ultralight aircraft, including the parachute, paraglider, and powered paraglider. The FAA’s *Powered Parachute Flying Handbook* (FAA-H-8083-29) introduces the basic pilot skills and knowledge essential for piloting powered parachutes. It benefits student pilots just beginning their PPC endeavors, as well as those pilots wishing to improve their flying proficiency and aeronautical knowledge, and flight instructors engaged in the instruction of both students and licensed pilots by providing information and guidance in the performance of procedures and maneuvers required for pilot certification.

The handbook begins with an introduction to powered parachutes, including a history of this unique aircraft. Chapters cover the aerodynamics of powered parachutes, components and systems, the powerplants (engines) used on these aircraft, preflight and ground operations, basic flight maneuvers, takeoffs and departure climbs, airspace, ground reference maneuvers, airport operations, approaches and landings, and night, abnormal, and emergency procedures. This book is the official FAA source for learning to fly powered parachutes and many test questions for the FAA Knowledge Exams for pilots come from this reference. Illustrated throughout with full-color graphics and photography, and includes an index. Soft cover, 160 pages.
