FAA’s Aviation Weather Services

New Edition of Venerable Weather Advisory Circular from ASA!

Newcastle, WA—New *Advisory Circular 00-45F* edition supersedes #AC 00-45E and features full-color illustrations throughout, and full coverage of weather-related tools to assist every pilot’s flight planning and in-flight decisions.

This text thoroughly explains the many U.S. aviation weather products and services available to pilots. It details the interpretation and application of advisories, coded weather reports, forecasts, observed and prognostic weather charts, and radar and satellite imagery. Weather product examples and explanations are taken primarily from the Aviation Weather Center’s Aviation Digital Data Service website <http://adds.aviationweather.noaa.gov>. The new AC provides hundreds of weather website addresses for weather resources, definitions, and additional information available in other FAA publications. An electronic copy of this printed book is available on the ASA website for pilots to access these clickable links—an unprecedented level of convenience and education for pilots planning their flights and researching weather.

The *Aviation Weather Services AC* continues to be a definitive resource when studying for pilot certification exams. This new, greatly expanded and full-color edition should remain a part of every aviator’s library. Includes weather station location tables, lists of contractions and acronyms, weather symbols, conversion charts, internet links, and more. Soft cover, 392 pages.
