## **ASA Introduces New View-Limiting Device** An Innovative Concept in Design and Convenience

Newcastle, WA—New “Hoodwink” is unlike any other view-limiting device available.

All pilots must conduct instrument training as part of their training curriculum — from private pilots to those working towards an instrument rating. This is usually accomplished by wearing a view-limiting device to restrict the pilot’s vision to the instrument panel, which prevents the pilot from looking outside the cockpit for a visual reference to his/her attitude and location.

**Hoodwink** is a unique foldable view-limiting device that has been designed for simplicity and ease of use. Its reinforced rim contains a steel loop that allows it to easily and automatically spring open when removed from its pouch and pack away for storage with just a simple twist. It’s lightweight, yet durable enough to withstand the rigors of daily use. In fact, it’s so lightweight that pilots may forget they’re wearing it! The compact 4" x 4" slim pouch is small enough to fit in a shirt pocket or in virtually any flight bag compartment. **Hoodwink** can be used with or without headsets. One size fits all and pilots will love its comfortable, unobtrusive functionality. With flight bags bursting at the seams these days, **Hoodwink** is a welcome addition for the student or instructor looking to lighten the load. Instructors can even carry one around as a spare for students who may forget to bring their own hoods. It’s the ultimate in form, function, and convenience.
